- Flash™ UV dye is an advanced class of highly concentrated ultra violet dye that uses DRY R™ instead of POE oil as its carrier.
- This, combined with our patented misting orifice, enables the dye to travel at the speed of the refrigerant while keeping the dye stable.
- One can treat up to 64 oz (1.8L) of oil. Flash UV dye uses the systems refrigerant as the propellant – creating a clean, no-mess injection every time
- Required hose sold separately.

EVA Anti-Vibration Pad

- The latest generation in vibration dampening technology.
- The most effective vibration dampening pad available on the market.
- The EVA Pad was tested against other pads at four different vibration settings.
- In the most severe vibration extremes, the EVA Pad outperforms cork and rubber by a margin of greater than 3:1!
- This is due to the special composite foam center which is much more structurally sound than cork.
- It is not affected by oils or chemicals that can break down cork and is much more effective at vibration dampening than solid rubber. All this at a very competitive price. Designed to withstand 50 psi.
